

Phat Pham

Senior Fullstack Engineer / Platform and Payments

Berlin, Germany | phatpt8@gmail.com | [LinkedIn](#)

Eight years building high-traffic web platforms from zero to scale. I own problems end-to-end: from shaping the architecture and aligning stakeholders to shipping reliable, user-facing software at pace. I push the quality bar across teams, document what matters, and treat engineering as a craft worth investing in. Equally sharp working independently and leading cross-functional initiatives. I step into ambiguity, define the path forward, and bring others along rather than waiting for direction.

EXPERIENCE

Senior Fullstack Engineer **Omio.com** 2025 - Present / Berlin, Germany

Platform Core and Payments team. Driving conversion improvements, payment integration, and cross-platform engineering quality across search, ancillary, and booking surfaces.

- **Cross-team leadership.** Actively engages Search Platform, UI Platform, and Frontend Chapter engineers on code reviews and technical direction, raising the quality bar beyond the immediate team.
- **Initiative ownership.** Identifies ambiguous, multi-team problems such as error monitoring standardisation and shared component gaps, then leads the solution design and stakeholder alignment to a decision.
- **Early stakeholder engagement.** Enters technical discussions at the problem-definition stage rather than the implementation stage, shapes decisions in public engineering channels, and connects the right people before work begins.
- **Knowledge infrastructure.** Authors Architecture Decision Records and technical documentation for significant implementations, publishes investigation findings as Confluence pages, and updates team playbooks as better approaches emerge.
- **Payment domain.** Owns the integration of new payment methods and currency support, and led the rework of error monitoring patterns to sharply reduce alert noise.
- **Testing foundation.** Designed and delivered a Cypress end-to-end testing framework for ancillaries and payment flows, establishing reusable patterns adopted across teams.
- **Proactive delivery.** Consistently drives improvements beyond assigned work: technical debt, tooling, and process changes initiated and closed without being asked.
- **AI-native workflow.** Applies AI tooling across documentation, code generation, review, and way-of-working, and shares learnings broadly with the team.

Senior Frontend Engineer **Just Eat Takeaway** 2022 - 2025 / Berlin, Germany

Core Platform team. Owned the frontend architecture for a multi-market ordering platform used by millions of users, operating as both a senior individual contributor and a technical anchor for the team.

- Led the multi-market rollout of a core ordering platform, coordinating backend API integrations and complex data migrations across millions of active users.

- Rebuilt the frontend architecture for performance and observability. New instrumentation cut mean time to resolution (MTTR) by 40%.
- Turned ambiguous product requirements into validated, measurable outcomes by working directly with product managers, designers, and backend engineers.
- Shipped CI/CD improvements, testing standards, and shared utilities that reduced new engineer ramp-up time by 30%.
- Grew four engineers through structured code reviews and pairing sessions, building a team culture of ownership and accountability.

Senior Fullstack Engineer **Axon (taser.com)** 2019 - 2022 / Remote

Core Platform team. Led the migration of a global law enforcement web platform from a legacy C#/JS stack to TypeScript and React, fundamentally improving performance and developer productivity.

- Delivered a React and TypeScript architecture that cut build times by 60% and halved frontend bug rates in production.
- Designed and shipped an accessibility-compliant internal component library used across six products.
- Deployed identity and access management microservices on Kubernetes using GitOps with Argo CD, making releases faster and rollbacks safe.
- Worked alongside designers and product managers to sharpen the UX of mission-critical tools used daily by thousands of law enforcement officers.
- Contributed to hiring decisions, onboarding structure, and coding standards that balanced speed with stability.

Senior Frontend Engineer **Lazada (Alibaba Group)** 2017 - 2019

Built and maintained high-traffic checkout and payment systems processing millions of transactions daily. Co-led the Lazada Wallet product from concept to production launch.

- Owned checkout and payment flows end-to-end, shipping features under strict performance and reliability constraints.
- Built an internal Incident and Risk Management tool adopted by Alibaba GOC 911 for faster escalation and resolution.
- Partnered with infrastructure teams to overhaul frontend deployment pipelines, cutting average release cycles from hours to minutes.
- Raised team engineering maturity by mentoring engineers on Alibaba internal frameworks and modern frontend practices.

EARLIER

Fullstack Engineer, Apiumhub. React and Node.js delivery for SaaS clients. Built shared frontend tooling that cut delivery cycles across the team.

JavaScript Developer, FPT Online (vnexpress.net). Shipped editorial tools and frontend performance improvements for Vietnam's largest online newspaper.

TECHNICAL STACK

Frontend React, Next.js, TypeScript, Redux, Zustand, Formik

Backend Node.js, REST, gRPC

Infrastructure AWS, Azure, Kubernetes, Terraform, Argo CD

Tooling Monorepos, CI/CD, Jest, Playwright, Cypress, Maestro

Design Systems Material UI, shadcn/ui, Ant Design, Pie Components

AI LLM-assisted code generation, documentation, testing, and ops workflows

Other Scala, C#

E D U C A T I O N

B.Sc. Computer Science, FPT Greenwich University (UK), Vietnam, 2011-2016
