

PHAT PHAM

Senior Software Engineer

Berlin, Germany | phatpt8@gmail.com | [linkedin.com/in/peter-pham8](https://www.linkedin.com/in/peter-pham8)

I turn ambiguous problems into reliable, high-scale products, owning the path from architecture to shipping. Building high-traffic web platforms from zero to scale, I own problems end-to-end, from shaping architecture and aligning stakeholders to shipping reliable, user-facing software at pace. I step into ambiguity, define the path forward, and bring others along rather than waiting for direction.

EXPERIENCE

Senior Fullstack Engineer, Omio.com · Platform Core & Payments 2025 – Present · Berlin, Germany

- Drives technical direction across multiple projects spanning the search orchestrator, booking funnel, payment-as-a-service, and shared UI components, treating product conversion rate (CVR) and business metrics as first-class engineering goals.
- Works in a build-and-fail-fast mode, shipping experiments quickly, measuring real impact, and doubling down on what moves the metrics.
- Shifted to an AI-native way of working, embedding AI across daily engineering from planning and execution to verification, multiplying personal output and sharing the patterns org-wide.
- Closed a cross-team error monitoring gap that cut on-call alert noise by 70%, making the on-call rotation calmer and faster to act on real incidents.

Senior Frontend Engineer, Just Eat Takeaway · Core Platform 2022 – 2025 · Berlin, Germany

- Grew into a go-to technical expert, solving a wide range of problems at massive scale and serving as the reliable person teammates turned to for hard technical questions.
- Owned application infrastructure for a multi-market ordering platform, optimizing request traffic and data delivery across markets in close collaboration with Cloudflare Workers.
- Drove many successful initiatives including large-scale page migrations, running A/B tests and short-lived experiments to validate ideas fast and improve the product at scale.
- Adopted the latest technologies pragmatically and continued mentoring engineers into autonomous, confident contributors.

Senior Fullstack Engineer, Axon (taser.com) · Core Platform 2019 – 2022 · Remote

- Built mission-critical software trusted by law enforcement, where correctness was non-negotiable and every technical detail mattered.
- Drove decisions with evidence, validating ideas through proof-of-concepts and clear design documentation in a rigorous, heavily-documented engineering culture.
- Supported and modernized a 20+ year-old legacy C# platform, leading a full-stack migration to React + TypeScript that cut build times 60% and halved production bug rates.
- Shipped an accessibility-compliant component library adopted across 6 products and 40+ engineers, and began mentoring fellow engineers.

Senior Frontend Engineer, Lazada (Alibaba Group) · Checkout & Payments 2017 – 2019 · Vietnam

- Thrived in a high-pressure, planet-scale environment serving billions of users across Southeast Asia.
- Became the domain expert for the checkout and payment funnel, owning the frontend that processed millions of transactions daily under strict latency SLAs (p99 < 200ms).
- Built an incident and risk management tool adopted by the Alibaba GOC 911 team, cutting escalation time from 15 minutes to under 2.

EARLIER

Fullstack Engineer, Apiumhub. React & Node.js delivery for SaaS clients.
JavaScript Developer, FPT Online (vnexpress.net). Frontend for Vietnam's largest online newspaper.

TECHNICAL STACK

Frontend & UI: React, Next.js, TypeScript, Micro-frontends, SSR/SSG, Performance Tuning	Backend & APIs: Node.js, REST, gRPC, Event-driven Architecture, Scala
System Design: Distributed Systems, Domain-Driven Design, CQRS, High Availability	Infrastructure: AWS, Kubernetes, Terraform, GitOps (Argo CD), Observability
Engineering Excellence: TDD, E2E Testing, CI/CD Pipelines, Monorepo Architecture, ADRs	Leadership & AI: Technical Strategy, Cross-team Influence, Mentorship, AI-augmented Workflows

EDUCATION

B.Sc. Computer Science FPT Greenwich University (UK), Vietnam · 2011–2016
